

## DATA PRIVACY AND SECURED HOSTING

### Introduction :

One of our clients is an all-inclusive alumni management software provider that helps build strong relationship between students, colleges, alumni and parents – delivering powerful functionalities that help connect the dots in the communication matrix between the groups so that they engage more effectively than before.

### Opportunity :

The client holds vast amount of sensitive and confidential data such as school records, alumni personal data, business information, etc. Loss of data might hamper performance of the platform and cause embarrassment or inconvenience to all individuals involved. It was required to implement appropriate security measures to prevent personal data being hacked or accidental loss of data due to improper hosting. They found in NorthAlley the perfect partner for hosting their data and provision of security.

### Solution :

The platform is hosted on NorthAlley's secured server, providing maximum security to the data, best performance and easy accessibility. With the use of world-class server infrastructure and real-time monitoring systems, there is zero percentage downtime and maximum reliability. It functions without any disturbances or loss of service. We helped our client in achieving a secure and intuitive platform offering full protection against malicious attacks and theft.

### Technologies :

Secure protocol version: HTTPS
